[Non-standard characters](#)

[Terms of Reference](#)

[JTIC records](#)

[TWR records](#)

Background [TOP](#)

The HTML coding and structure used in JDS HTML files has developed over time since 1996. The principal concept has been to keep to a limited code set using a text editor approach rather than use a proprietary HTML editor or MS Word HTML export. In the early days there were a number of HTML browsers available which used differing code sets and some customers had their own customised HTML browsers. It is still considered a proper objective to keep the HTML code simple until XML can provide a more flexible and acceptable way of presenting Jane's data to customers in their chosen environments.

The presentation structure of JDS files has also developed over time, but is similar for all publications. Within the <head> of the file is the meta data, within the <body> of the file the data is bounded by <!-- comment fields -->. The meta data fields are standard in all files and will exist when there is no content for the field with the exception of one field to be explained later. There are a limited number of comment fields used to express JDS data. The comment fields at the beginning of the <body> of the file are usually standard but the comment fields are not in a fixed structure, a field may be used more than once or not at all.

Presentation structure is as follows:

Meta data [TOP](#)

The meta data is extracted from the main body of a record (file) and is used for purposes of indexing and display within interfaces on janes.com. It also allows customers to use the content similarly. The meta data is not displayed directly to the customer when browsing the record.

(The lines are numbered for reference only and are not in the HTML):

1. <head>
2. <title>JEOD 19-Nov-2002 *DATA SUMMARY/USA</title>
3. <META NAME="Publication" CONTENT="Jane's Explosive Ordnance Disposal">
4. <META NAME="PubAbbrev" CONTENT="JEOD">
5. <META NAME="Vollssue" CONTENT="">
6. <META NAME="Edition" CONTENT="2003-2004">
7. <META NAME="PubDate" CONTENT="20030708">
8. <META NAME="PostDate" CONTENT="20021119">
9. <META NAME="Section" CONTENT="DATA SUMMARY">
10. <META NAME="Country" CONTENT="United States">
11. <META NAME="Company" CONTENT="">
12. <META NAME="Division" CONTENT="">

```

13. <META NAME="Title" CONTENT="">
14. <META NAME="Toc1" CONTENT="DATA SUMMARY">
15. <META NAME="Toc2" CONTENT=" United States ">
16. <META NAME="Toc3" CONTENT="">
17. <META NAME="Toc4" CONTENT="">
18. <META NAME="Credit" CONTENT="COLIN KING | A N OTHER">
19. <META NAME="OrgID" CONTENT="19102|404908">
20 <META NAME="ChronLink" CONTENT="jmmc2003/jmmc0123.htm:12-Mar-2002|jmmc/jmmc1003.htm:16-Nov-2002">
21. </head>

```

Notes:

Line 2; JEOD publication acronym; 19-Nov-2002 date posted to janes.com; ‘*’ in this position indicates there is one or more images with the data; DATA SUMMARY is the section; USA is the country section for this data within the DATA SUMMARY section; other information such as title of the data or company name may be displayed. Each piece of information is separated by ‘/’. The format for this line has been implemented for all publications from 9 May 2003. Sentinel and Special reports have used this format since September 2002. The JDS archive and Online archive have been updated to this format.

The format prior to 9 May 2003 and how JDS HTML customers will have retained any archive was:

```
2. <title>JEOD 19/11/02 - *DATA SUMMARY/USA</title>
```

No action is being taken to update customer archives to the new format.

The differences are the date format being changed from dd/mm/yy to dd-mmm-yyyy, the ‘-’ position displayed a publication page number in the early years until abandoned when the page number could not be maintained, and is now removed.

Line 6; 2003-2004 is the publication year for the hard copy edition if this data is printed

Line 7; 20030708 is the hard copy publication date ie 8 July 2003. For a monthly publication this may be shown as 20030700 for a July 2003 publication.

Line 8; 20021119 is the date the electronic content is released for publication to janes.com. This is known as the Posting date. When the hardcopy is published before the electronic this data should be the hardcopy publication date.

Line 9; Section can be a country, platform type (eg frigates), equipment type (eg rifles), information type (eg news briefs)

Line 10; Country shows the country of manufacture or the operator or country of content (eg Sentinel). Capitalised casing is used. Country names are to be validated against the Jane’s country name standard.

Line 11; Company shows the name of an organisation, manufacturer, consultancy, agency etc

Line 12; Division identifies a record that is a division, sub-organisation of a major organisation.

Line 13; Title is platform name, equipment name, story headline etc;

Lines 14-17; Fields that will assist ordering the records of a publication into a sequence appropriate to the publication usually formed from the contents of Lines 7 and 9-13, not necessarily in the same order as the hardcopy publication. Originally designed for a potential software interface to indexed data

Line 18; The name of the editor, contributor, journalist etc. More than one name may be shown. Text in upper case only. The separation between names is the ‘|’ character. This content is repeated at the end of the record (see *below*).

Line 19; This field is the exception and is only used in Reference data where the record is to be linked to one or more organisations (ie manufacturers, companies etc) for mailing purposes. The number refers to the Organisation ID in the ABC/IDD database.

Line 20; This field is also an exception and is used in principally Reference data at present to link the current record to its previous version which should be held in an archive with the shown directory/folder structure. In Jane's Online service all

links in this field will be available. Other customers will be able to use this field to link with the Jane's content they hold in archive.

Body data [TOP](#)

This is the main body of data displayed to a customer, certain HTML coding will format the display, other coding identify fields of content.

1. All records should have the following HTML to set the colour etc. and display the Jane's logo to identify the content as a Jane's product. The html.jpg file has to be in the same directory as the current record and delivered to the customer with data files. See 'Changed' Text below for green text.

```
<body bgcolor="#DDDDDD" text="#000000" link="#0000FF" vlink="#FF0000" alink="#00AA00">
<center>

<p>
</center>
```

2. The following is typical of a Reference record with the Section field and Country field displayed. Other records may have just the Section. Careful observation of the publication content is essential. Each comment field opener and closer is on a separate line to it's content. Where more than one field is displayed in this part there is a ', ' separator.

```
<strong>
<!-- SECTION -->
DATA SUMMARY,
<!-- /SECTION -->
<!-- COUNTRY -->
United States
<!-- /COUNTRY -->
</strong>
```

3. This part is to display the number of images available in this record and provides a link to the first image. Images are situated at the end of the record in most of the current electronic publications. The exceptions are Sentinel and Special Reports, where images are in position with context.

```
<!-- IMAGECOUNT -->
<table width=100%>
<tr><td align="right">
<a href="#img"><strong>2 Images</strong></a></td></tr>
</table>
<!-- /IMAGECOUNT -->
```

4. This part is to display the number of video clips available in this record and provides a link to the first video. Video clips are situated at the end of the record in most of the current electronic publications.

```
<!-- VIDEOCOUNT -->
<table width=100%>
<tr><td align="right">
<a href="#vid"><strong>1 Video</strong></a></td></tr>
</table>
<!-- /VIDEOCOUNT -->
```

5. To display the Posting Date:

```
<!-- DATE -->
```

```
<p align="right">
<font size=-1><b>Date Posted: 19-Nov-2002</b></font>
<!-- /DATE -->
<p>
```

6. The publication title where this currently appears in hardcopy or electronic only title is shown here. Capitalised case is used. This section of the file is separated by a horizontal rule <hr>.

```
<center>
<font size=-1> Jane's Explosive Ordnance Disposal </font></center>
<hr>
<p>
```

7. Most records will have a Title and is coded as follows. Casing will be as in original data. No action taken to change it.

```
<!-- TITLE -->
<h2> PRODUCTION - AIR-LAUNCHED ROCKETS </h2>
<!-- /TITLE -->
```

8. If there is no Title any appropriate Comment Field for the content will be used. The current list of [Comment Fields](#) is shown below. Explanation of usage will be given where considered appropriate or not self-evident. These fields will be used throughout this <body> section.
9. The end of the record has a standard format as follows. The Update Status will not appear in News publication data or other data that is not routinely updated. The complete Image field will be repeated for each image of the record. A horizontal line precedes the copyright line which is required in all records. The copyright year is important. It is the year the record is created and published electronically. It is independent of the dates for the hard copy publication. The Credit field will be empty if there is no name for the credit. The credit name will be in Capitalised case and separated by a semi-colon after each name.

```
<!-- UPDATE STATUS -->
<table width=90%>
<tr><td align="right"><i><b>UPDATED </b></i></td></tr>
</table>
<!-- /UPDATE STATUS -->
<p>
<!-- IMAGE -->
<a name="img"></a>
<table>
<tr> <td>
<a href="images/p0234.jpg"></a></td> <td><i>Bulgarian 57 mm S-5KO HEAT/frag rocket</i><br>
<i>(2001)</i></td></tr>
</table>
<!-- /IMAGE -->
<hr>
<table border=0 width=100%>
<tr><td align="left">
<font size=-1>&#169; 2003 Jane's Information Group</font></td><td align="right">
<font size=-1><b>
<!-- CREDIT -->
Colin King; A N Other
<!-- /CREDIT -->
</b></font></td></tr>
</table>
</body>
</html>
```

10. It should be noted that data not within appropriate Comment fields is to be bounded by the Text field. This will ensure at any future date, and the facility is available, all the data in a record may be indexed by individual areas of data and may be displayed, printed or saved as such.

```
<!-- TEXT -->
<p>
Text and coding ...
<!-- /TEXT -->
```

Comment fields [TOP](#)

This is a listing of all the current Comment Fields used. The [Terms of Reference](#) will provide more detail.

Font, character style and lists

No font is set within JDS HTML. Font size is limited to using <h2> for Titles and '-1' within the paragraphs 5, 6, 7 and 9 above for particular pieces of information. Bold, italic and underline codes are used where intended by the editor. The listing codes are used for bulleted paragraphs. The indent code <dir> is used in some Special Reports but has very limited use elsewhere. The paragraph <p> is normally used without the appropriate end code of </p> unless it includes attribute codes.

'CHANGE' text [TOP](#)

Where the Update Status is shown as UPDATED the text that is changed will be highlighted as green characters. This text is coded with at the start and terminated with . NEW records will be all green text.

Tables [TOP](#)

Tables are normally set within the data before being processed for JDS HTML and an example follows. This format is usually left unchanged. Tables without width and other parameters are not normally changed to include such settings, when included will usually be expressed as a percentage not a fixed width.

```

<table border cellspacing=1>
<tr><td width="12%" valign="top">
<p>
<b>SAM</b></td> <td width="12%" valign="middle">
<p>
<b>AAM</b></td> <td width="13%" valign="middle">
<p>
<b>ASM</b></td> <td width="25%" valign="middle">
<p>
<b>Bombs</b></td> <td width="13%" valign="middle">
<p>
<b>Mortars</b></td> <td width="10%" valign="middle">
<p>
<b>Rockets</b></td> <td width="16%" valign="middle">
<p>
<b>Anti-tank</b></td> </tr>
</table>

```

Non-standard characters [TOP](#)

Care has to be taken to present accented characters and special characters using the appropriate HTML coding. These characters should not be displayed as e.g. é for e acute. Accented characters should be coded as é or é format. If the code number to be used is above 255 then care must be taken to use an alternative code if available as not all browsers interpret the code above 255 appropriately.

Terms of Reference [TOP](#)

Address	Usually the address of a company. May include the telephone, fax and telex numbers etc. May also include physical information such as site area size, staff numbers etc.
Alternative Name	In IDD and ABC used to identify a company by another known name.
Beam (m)	The greatest width of a ship - parametric data extracted from the record – JFS, JMS
Building	The number of ships in the building programme within a class - parametric data extracted from the record – JFS
Company name	This may refer to an organisation (eg Ministry of Defence), manufacturer, consultancy, agency etc
Country	In Reference publications usually the country of manufacture. It can be the operating country as in Jane's Fighting Ships. When used as a comment field more than one may be valid in a file. Within meta data the country name must be valid with the Jane's country name standard and in capitalised type.
Credit	The name of the editor, contributor, journalist etc. More than one name may be shown. In the meta data section text in upper case only. The separation between names is the ' ' character. In the end section of the record the names are capitalised and separated by a semi-colon.
Disp.dived (tonnes) Disp.full load Disp.standard Disp.surfaced	The displacement of ships under certain conditions - parametric data extracted from the record – JFS
Division name	This is mainly used for International Defence Directory and International ABC Directory where it identifies separate divisions of a large organisation in a separate file.
Draught (m)	Depth from waterline to keel for a ship – parametric data extracted from the record – JFS, JMS
Edition	The year or period this publication is considered valid
GROUP_AGENCY_REGION	This is used in TWR to indicate the name(s) of a terrorist group or agency and the region of the world referred to in the record
Height (m)	The height of an aircraft - parametric data extracted from the record – JAWA, JAU
Hovering ceiling (m)	The hovering ceiling of a helicopter - parametric data extracted from the record – JAWA, JAU

Hulls	A table holding the names of ships within a class and may include builder, commissioning dates and other valid information - JFS
Image	The field holding the filename, caption, copyright holder and date of an image, will also include the thumbnail reference for display in the record. Images have a prefix to the barcode number; 'p' is for photograph, screen shot, artist impression or a picture other than the following – 'm' is a map, 'l' is a line drawing showing plan and profile views with the aspects of scale, 'g' is a graphic which may include 3D line drawing, text over photos, charts or wire diagrams.
Imagecount	The number of images included in the record. There is a link to the first image. Currently a link is not made to subsequent images in the record.
In service	The number of ships within a class in active service – parametric data extracted from the record – JFS, JMS
Introduction	The 'stand first' paragraph of a record. Usually within a news story.
Key personnel	The titles and names of key personnel within an organisation, may also include their telephone and fax numbers.
Landing run (m)	The distance an aircraft requires to land - parametric data extracted from the record – JAWA, JAU
Length (m)	The length of a ship, aircraft - parametric data extracted from the record – JFS, JMS, JAWA, JAU
Max level speed (kts)	The maximum level speed of an aircraft. Usually the highest of the aircraft types within a record - parametric data extracted from the record – JAWA, JAU
Max range (nm)	The maximum range of an aircraft, the condition is not included. Usually the highest if more than one is given – parametric data extracted from the record – JAWA, JAU
Max rate of climb (m/min)	An aircraft's maximum rate of climb - parametric data extracted from the record – JAWA, JAU
Max T-O weight (kg)	An aircraft's maximum take-off weight - parametric data extracted from the record – JAWA, JAU
Max wing load (kg/m ²)	Aircraft maximum take-off weight divided by wing area - parametric data extracted from the record – JAWA, JAU
Meas.dwt (tonnes) Meas.gross Meas.net	Measurement is a computed capacity of a ship's hull. Dwt is dead weight – parametric data extracted from the record – JFS, JMS
Platform	Ship, aircraft, vehicle etc that is fitted with other equipment

Posting date PostDate	The date the data (record / file) is available in final QA'd electronic format for posting to janes.com archive. If the date finally available in electronic form is after hard copy publication the hard copy publication date should be used for the PostDate
Products	The products of an organisation mainly in IDD and ABC but has been used in other publications
Proposed/Transfer	Number of ships being transferred – parametric data extracted from the record – JFS
PubAbbrev	A designated abbreviation/acronym for this product. Allocated by the Data Standards Manager.
PubDate	The date of publishing as hardcopy or electronic only.
Range (nm)	The range of a ship, the condition is not included and is the highest shown – parametric data extracted from the record – JFS
Reference	The identification number of a company's record in the IDD and ABC database (used in the OrgId meta data).
Rotor diameter (m)	The diameter of a helicopter's rotor(s) – parametric data extracted from the record – JAWA, JAU
Section	This is the title given by editors to parts of their publication. It can be a country, platform type (eg frigates), equipment type (eg rifles), information type (eg news briefs). It can be described as an area of information.
Service ceiling (m)	The service ceiling of helicopters – parametric data extracted from the record – JAWA, JAU
Specifications	The factual information about a platform or equipment's attributes.
Speed (knots)	Speed of a ship, usually the maximum – parametric data extracted from the record – JFS
Text	This field name is used to hold all general text that is not held within other fields.
Title	The platform name, equipment name, country name, company name, story headline etc usually the subject of the file.
T-O run (m)	The distance required for an aircraft to take off, usually the longest – parametric data extracted from the record – JAWA, JAU
Toc1, 2, 3, 4	Fields that will assist ordering the records of a publication into a sequence appropriate to the publication, not necessarily in the same order as the hardcopy publication. Originally designed for a potential software interface to indexed data.

Update status	The status of the content at the Posting Date. The status will be New, Updated or Verified and is applied to content that is regularly updated ie Reference content. News data will not have a status.
Video	The field holding the filename, caption, copyright holder and date of a video, will also include the thumbnail reference for display in the record
Videocount	The number of videos included in the record. There is a link to the first video. Currently a link is not made to subsequent videos in the record.
Vollssue	The Volume and Issue number for the hardcopy particularly or can be in an electronic only record.
Wing span (m)	The length of an aircraft's wing span, usually the largest shown – parametric data extracted from the record – JAWA, JAU

JTIC [TOP](#)

The Jane's Terrorism and Insurgency Centre records have some additional meta data fields with are also shared with TWR. The fields are as follows:

```
<META NAME="CountryReferences" CONTENT="Afghanistan|Pakistan|Indonesia|Malaysia|Philippines|Singapore">
<META NAME="RegionReferences" CONTENT="South Asia|Southeast Asia">
<META NAME="TerritoryReferences" CONTENT="">
<META NAME="TerroristGroupName" CONTENT="Gerakin Aceh Merdeka (GAM)|Al-Qaeda|Abu Sayyaf|Laskar Jihad|
Jemaah Islamiyya (JI)|Indonesian Islamic Liberation Front (IILF)|Moro Islamic Liberation Front (MILF)">
```

The field content is considered self evident from the field names. This information is captured at the creation of the record.

TWR [TOP](#)

The Terrorism Watch Report records have a number of additional meta data fields and a sample of a full record is as follows:

The field content is considered self evident from the field names. This information is captured at the creation of the record.

<!-- TEXT -->

BURUNDI'S main Hutu rebel group has threatened to increase the intensity of its attacks on the country's capital, Bujumbura, BBC News reports. The Forces for Defence of Democracy (FDD) have been shelling the capital and other cities since last Thursday. An FDD spokesman said the group would step up its attacks until the government agreed to restart ceasefire talks, and accused the government of ignoring an agreement reached last December under which the rebels would take seats in a power-sharing government. Current president Pierre Buyoya, an ethnic Tutsi, is due to hand over power to a Hutu deputy on 1 May as part of the peace deal. However, the FDD is claiming it is still being excluded from key government institutions such as parliament and the armed forces.
